

## SYSTEMATIC LIST OF BIRDS – Peru 2005

This list follows the taxonomy, names and sequence of James F. Clements (Birds of the World, A Check List, Fifth Edition, 2000, including updates May 2000 - December 2005).

This fifth edition is based primarily on the higher taxonomic sequence outlined in the "Handbook of the Birds of the World" series published by Lynx Edicions.

The Dutch names follow the translated "Complete Checklist of Birds of the World" (Complete Checklist van Vogels van de Wereld) of Michael Walters.

Numbers quoted are estimates of the minimum numbers seen.

I have not listed exact numbers and sites of all species. I am sure that any birder can survive without knowing how many Rufous-collared Sparrows we saw in the Andes.

**E** = Peruvian endemic species

**NE** = Nearly endemic species to Peru

**TE** = Tumbesian endemic species, these are birds whose range is restricted to dry to semi-humid areas in north-western Peru and south-western/western Ecuador

10+ = minimum 10 birds
